

# Save Money and Save Waste when you Clean and Replace!

## ISO 14001

*Stop throwing out those expensive air filters and filling up the landfills with dumpsters full of filters that can be professionally cleaned and reused.*

If your company is in the process of ISO 14001 certification or is already certified, Advance Filter can help.

Filter cleaning and reuse is an area of conservation that most organizations have not thought of. That's why thousands of filters needlessly fill the landfills when they could be professionally cleaned and reused.

Our professional cleaning process will help you do your part for conserving our resources while saving you money at the same time.

Advance Filter can help you with the continual improvement process of ISO 14001.

Cleaning and reusing your filters greatly reduces waste to the landfills.

As an added benefit, cleaning and reusing filters will save your company significant money when compared to the cost of replacing with new filters and the disposal costs of used filters.

We are developing a process so that filters which are no longer usable can be parted out and recycled instead of just going into the trash.

Satisfying Customers for Over 25 Years by Saving Money and Reducing Waste
